Contents

Volume 21, Number 1

Theoretical aspects of H/N/O-chemistry relevant to the thermal reduction of NO by H_2 1
E. W. G. Diau, M. C. Lin, Y. He and C. F. Melius

Reduced kinetic models and their application to practical combustion systems 25
J. F. Griffiths

Volume 21, Number 2

Theoretical study of micro- and macroscopic processes developing in solid fuels during combustion 109
S. O. Gladkov

Commercialization of fuel cells 145
S. S. Penner, A. J. Appleby, B. S. Baker, J. L. Bates, L. B. Buss, W. J. Dollard, P. J. Farris, E. A. Gillis, J. A. Gunsher, A. Khandkar, M. Krumpelt, J. B. O'Sullivan, G. Runte, R. F. Savinell, J. R. Selman, D. A. Shores and P. Tarman

Microscales of turbulent combustion 153
V. S. Arpaci

Development and testing of diesel engine CFD models 173
R. D. Reitz and C. J. Rutland

Volume 21, Number 3

The global equivalence ratio concept and the formation mechanisms of carbon monoxide in enclosure fires 197
W. M. Pitts

Fluidized bed combustion of alternative solid fuels; status, successes and problems of the technology 239
E. J. Anthony

Volume 21, Number 4

Coal: Energy for the future 269
J. P. Longwell, E. S. Rubin and J. Wilson

Volume 21, Number 5

Understanding NO_x formation in nonpremixed flames: Experiments and modeling 361
S. R. Turns

Atmospheric chemistry of alternate fuels and reformulated gasoline components 387
F. M. Bowman and J. H. Seinfeld

Fundamental hydrodynamics related to pressurized fluidized bed combustion 419
P. E. G. Gogolek and J. R. Grace

Volume 21, Number 6

Thermochemical and chemical kinetic data for fluorinated hydrocarbons 453
D. R. Burgess Jr., M. R. Zachariah, W. Tsang and P. R. Westmoreland

Applications of direct numerical simulation to premixed turbulent combustion 531
T. Poinsot, S. Candel and A. Trouvé
